Optimize Your Logistics with the HAXO-16BT

Managing multiple shipments is a daily pressure point for logistics teams, especially when every load can have different condition requirements.

Manually downloading data from each logger to a computer takes time. Chasing fault reports and trying to catch excursions early is slow and hard to manage at scale. When documentation takes too long, decisions get delayed and corrective action is missed. Both operational efficiency and customer trust are put at risk.

Solution

Time Efficiency

Automatically download data
when your shipments arrive

No manual report handling

Automated Reporting

Reports are automatically sent to key staff
when data is downloaded in the app

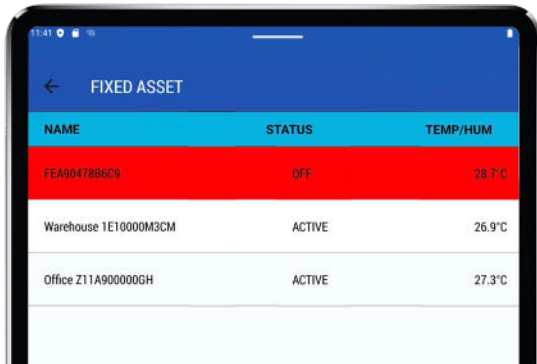

Manage reporting in one place with workflows
that support FDA compliance

**Reduce Reporting Admin.
Increase Efficiency.**

Receiving Shipments with Easier Process

Automate Your Warehouse Process on a Tablet

With the tablet mounted on the wall, your team can see the latest readings at any time.

No need to collect each logger as reports & data are sent automatically once a download is triggered.

Download Your Data Anywhere* on Phone

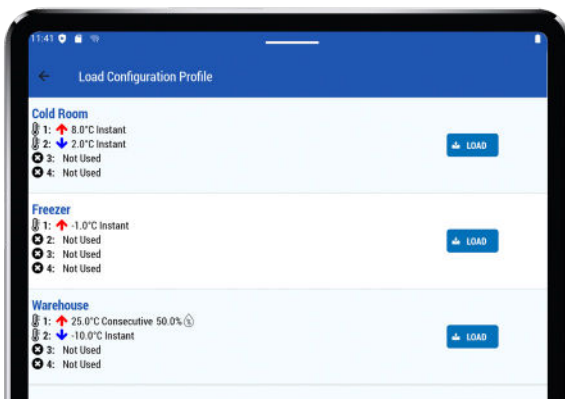

Access your shipment data anytime as you move around the warehouse.

Set up loggers in one hand and download reports whenever you need them.

Sending Shipments with Easier Process

No Computer Needed For Configuration

Easy to configure loads of your shipments at once on your tablet. No computer is needed to configure your loggers.

Trigger Downloads and Auto-sent reports to Phone

Once the shipment has been received, you will receive data and reports automatically. No manual data download, thanks to the automated data upload.

Simply setup through your device to send reports automatically when a download is triggered.

Save Time with LogTag® Link

As shipments come within range, your tablet shows the latest logger readings.

The app will automate your compliance practices. Data collection and upload to LogTag® Online run automatically.

Your report will then be generated automatically and sent to key personnel. Making insurance claims easy.

No computer needed to download reports on your mobile device as they are automatically saved locally on your device.

Automated compliance, no action needed.
