Alternative methods of using Isotech Portable Calibrators

■ A Basic Dry Block Calibrator

The thermometer under test is compared to the dry block controller value.

Useful for moderate temperature ranges and quick testing.

Thermometer
under test

A control system with digital display shows the set and measured value from the calibration volume.

■ An ISO 9000 Calibration System

A thermometer under test is compared to a calibrated standard, for true traceability and clearly meets the requirements of ISO9000

Standard

CERTIFICATE
for standard /
in-built indicator

In addition to the temperature control system with its display the Isotech SITE model includes a separate temperature read out for the Standard (Reference) probe.

■ Isotech ADVANCED Calibrator

Isotech ADVANCED models have inputs for both the test thermometer and a calibrated standard.

■ Using an External Indicator

Similar to the previous configuration but an external indicator is used - one instrument can be used with many calibration baths - the bath or baths do not need a calibration certificate, but they need an evaluation report.

■ An example of Multiple Sensor Calibration

You can add a scanner for multi-probe calibration - the system can then be automated.

Isotech - award winning flexible solutions for all sensor types from -45°C to 1200°C

By adding different accessories the 4000 Series can be used in up to six different modes - Dry Blocks, Liquid Baths, Ice Bath, Surface Sensor Calibrator, IR Thermometer Calibrator and even with ITS-90 Fixed Point
