ROOM CONTROLLER HLS 44-3P

HLS 44-3P is a versatile room controller for individual room temperature and VAV control applications. The controller can be connected to any system that supports Modbus RTU protocol by using the RS-485 connection. The bus is galvanically isolated from the controller's other electronics.

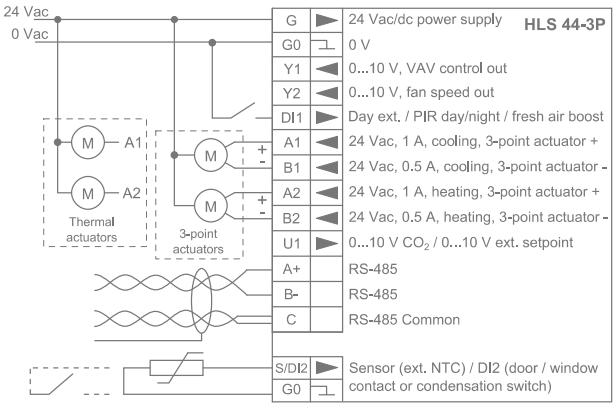

Controller supports 0...10 V controlled actuators and/or thermal actuators or 3-point actuators. The fan coil fan speed can be controlled directly with a 0…10 V output if the fan coil is equipped with EC motor. FCRY 3 relay module is needed for controlling the fan speed of 3-speed fan.

Fresh air supply can be controlled with variable air volume control by using the 0…10 V output. A demand based and energy saving ventilation can be implemented with a separate carbon dioxide measurement connected to the U1 input.

Temperature is detected with an internal or external NTC10 sensor (terminals included). Alternatively the external temperature sensor terminals can be used for connecting door/window contact or condensation switch.

The controller settings can be supplied with controller buttons or by using the HLS 44-3P-SER commissioning tool which speeds up the commissioning.
