TRC-A-3A - Touchscreen apartment controller

The TRC-A-3A room controllers are designed for apartment control and have modern sharp slim line 3.5" colour touchscreen interface. The controllers have heating and/or cooling controls with summer / winter change-over function.

The controllers have also Home / Away / Boost operation button allowing the apartment conditions to be set to required state with a simple press of a button. The controllers can control the apartment supply and extract flow together with the extractor fans allowing the correct pressurised conditions to be achieved in all operating conditions.

The TRC-A-3A controllers have three analogue 0...10 Vdc outputs, two external sensors inputs (resistive or analogue) and one digital input. The devices are available with both Modbus RTU and BACnet MS/TP communication.

As an option there are additional functions and measurements available:

- Relative humidity measurement (-RH)
- CO_2 measurement (-CO2)
- Analogue inputs instead of resistive inputs (-AI)
- Consumption data view (-CD)

Wiring

WARNING: Device wiring and commissioning can only be carried out by qualified professionals. Always make the device wirings in de-energised electricity network.

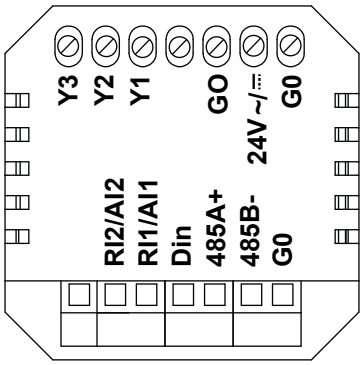

WARNING: This product is appliance class III product according to IEC 60664-1. The product may only be connected to SELV (safety extra low voltage) electricity network.

CAUTION: The product may only be connected to overvoltage category I or II electricity network according to IEC 60664-1. Use external overvoltage protection if the device is connected to the overvoltage category III electricity network.

CAUTION: The used cables must have minimum of 230 Vac insulation for SELV wiring, if the mounting box includes also 230 Vac voltage wirings.

CAUTION: Use single stranded wires or use wire end sleeves if multi stranded wires are used.

CAUTION: Don't connect fan motors in parallel. One product can control only one fan motor.
